PROFESSIONAL SUMMARY

B.Tech graduate in Artificial Intelligence and Data Science with hands on experience in building data pipelines, developing REST APIs, and applying machine learning to solve real world problems. Demonstrated ability to collaborate with cross functional teams, translate business requirements into actionable plans, and deliver quality work on schedule. Proficient in Python and SQL with exposure to cloud platforms, data engineering workflows, and intelligent automation. Eager to contribute to internal initiatives, engage with global teams, and grow through mentorship in a collaborative team environment.

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science
VKR VNB and AGK College of Engineering, Gudivada, Andhra Pradesh — Jun 2021 – Jul 2025

TECHNICAL SKILLS

Programming Languages: Python, SQL, Scala
Data Engineering: ETL Development, Schema Validation, Dimensional Modeling, Data Reconciliation
Cloud Platforms: Microsoft Azure (Data Factory, Databricks, SQL Database, Key Vault), AWS (S3, RDS)
Machine Learning and AI: NLP, Deep Learning, Statistical Analysis, Data Science
Tools and Frameworks: Apache Airflow, GitHub Actions, Power BI, REST APIs, MySQL

WORK EXPERIENCE

Python Developer Intern | Plumsoft — Jan 2025 – Jun 2025

- Built Flask based REST API services to expose model predictions as endpoints, improving system reliability by 20% and enabling integration with analytical dashboards.
- Optimized data serving API endpoints to reduce average response latency by 25% and increase request throughput for production workloads.
- Translated stakeholder requirements into functional software modules and collaborated with a five member engineering team to streamline CI/CD workflows and deliver features on schedule.
- Participated in team meetings to align on project priorities and contributed to cross functional discussions on system design and deployment planning.

PROJECTS

Intelligent Data Quality Assurance Platform for Healthcare Analytics — 2025 – 2026

- Engineered an ETL data quality platform on Azure Databricks and Azure Data Factory to validate healthcare claims and patient records through null checks, schema validation, duplicate detection, and referential integrity checks.
- Identified data anomalies using rule based detection logic and routed rejected records into a quarantine table with batch level quality scores for continuous monitoring.
- Deployed Power BI dashboards for pipeline observability and orchestrated automated batch pipelines using Apache Airflow, reducing manual intervention in large scale dataset processing.

CareTalk: AI Powered Patient Conversation Insights — 2025 – 2026

- Designed an NLP analytics pipeline powered by the Gemini API to summarize patient conversations into clinical abstracts and extract structured medical intents such as appointment requests, prescription refills, and symptom descriptions.
- Applied urgency signal detection to score and rank high risk interactions, triggering automated alerts to a simulated care team workflow with a relational output schema.
- Published a Power BI report visualizing sentiment distribution, top reported issues, and urgency flagged cases, enabling clinical staff to monitor engagement trends and act on critical conversations.

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Data Engineer Associate (DP-203)
